

Enterprise Cyber Risk Analysis & Metrics Reporting

One-Page Executive Dashboard - Fictional Financial Services Company

Risk Overview	Current Assessment
Critical Asset	Online Banking Platform
Risk Scenario	Credential theft leading to customer account compromise
Business Impact	Financial loss, customer data exposure, reputational and regulatory impact
Inherent Risk	High
Treatment	Mitigate - MFA, password policy enforcement and suspicious-login monitoring
Residual Risk	Moderate (illustrative project assumption)

FAIR / Monte Carlo	Illustrative Result
Loss Event Frequency	0.8 events/year (most-likely assumption)
Median Annual Loss Exposure	\$2,105,726
Mean Annual Loss Exposure	\$2,222,899
90th Percentile Annual Loss	\$3,483,521
Trials	10,000

Type	Metric	Current	What it tells leadership
KPI	Customer accounts with MFA enabled	94%	Performance against authentication-control objective
KRI	Successful account compromises / month	6	Current risk exposure
Control Effectiveness	Compromises involving MFA-enabled accounts	17%	Whether the control is reducing compromise
Trend	Account compromises	12 -> 6 (Apr-Sep)	Risk indicator is improving over the sample period

Management Decision / Recommendation
Continue expanding MFA coverage, investigate compromises occurring despite MFA, strengthen authentication controls where needed, and monitor KPI/KRI trends. Compare the reassessed residual risk with the organization's approved risk tolerance before accepting the remaining exposure.
Important: All company details, assumptions and values in this portfolio project are fictional and illustrative. They demonstrate the risk-analysis and reporting process; they are not claims about a real financial institution.
